

## **Telford company gains industry stamp of approval**

An ambitious and expanding Shropshire-based project management and construction development company, which is involved in regeneration projects throughout Shropshire and the west midlands, has received accreditation from the Chartered Institute of Building (CIOB) – a professional acknowledgement which confirms its status as a quality, professional business.

They are now part of an elite list of companies who hold the accreditation of being a Chartered Building Company (CBC).

“Recognition from the world’s largest and most influential professional body for construction management and leadership goes a long way to reinforce the reputation we have and the business during unprecedented times and are now prepared to deliver first-class work,” said Kieran Danby, Director of BuildFifty5 Living.

“Our ethos is to challenge designers and contractors to maximise potential with fresh ideas and innovative thinking, while at the same time placing our clients, their needs and aspirations at the heart of what we do,” he added.

The business, which is located at the e-Innovation Centre in Telford, is actively involved in affordable schemes covering residential, retirement, assisted living and mixed-use, and leisure schemes. Skill sets are shared across the buildfifty5 group of companies to identify, secure, and deliver opportunities.

Mr Danby concludes: “We maximise potential using fresh ideas and innovative thinking, but always with the and surrounding areas.

“We dare to be different. Our schemes utilise both brownfield and greenfield settings to improve the built environment through innovate design solutions. We are not bound by traditional or institutional procurement. We seek to improve the quality of life for the end users and enhance the local areas. Our aim is to always support local authorities and organisations to help meet housing needs.”

The Chartered Institute of Building has been promoting the science and practice of building and construction since 1834, with its members working worldwide in the development, conservation and improvement of the built environment.
